Meeting ID: DEC-002

Meeting Title: PullUp Product Review & Taxi Pool Approval Meeting

Date: 14 May 2026

Time: 4:00 PM – 5:40 PM

Location: Atlas Campus – Innovation Room

Participants:

- Krish (Founder)
- Rhythm (Technical Team)
- Product Advisor
- Lead Developer
- Operations Representative

Transcript Source: Generated from meeting recording using speech-to-text software.

Classification: Decision / Approval

Status: Approved

Reference Documents:

- Requirement\_v1.pdf
- Meeting\_Transcript\_1.txt
- Technical Review Notes
- MVP Planning Draft

---

[00:00:07]

Krish:

Thanks everyone.

Today's goal is pretty simple.

We need to decide what PullUp Version 1 actually becomes.

Over the last month we've had multiple discussions, looked at user feedback, reviewed the current build, and now we need to lock down priorities.

---

[00:00:41]

Product Advisor:

Agreed.

Right now there are too many possible directions.

Ride discovery.

Taxi pooling.

Event transportation.

Campus networking.

We need focus.

---

[00:01:10]

Krish:

Exactly.

If we try to do everything we'll launch nothing.

---

[00:01:36]

Lead Developer:

Current build already supports:

- Authentication
- Profiles
- Ride Creation
- Ride Discovery
- Basic Notifications

Most of that is stable.

---

[00:02:04]

Rhythm:

The question is whether ride discovery alone creates enough value for students.

---

[00:02:22]

Krish:

That's the biggest thing.

I've spoken to around thirty students.

Almost nobody got excited about "ride discovery."

They got excited about saving money.

---

[00:02:59]

Product Advisor:

That matches the feedback I received too.

Students don't care about seeing rides.

They care about splitting costs.

---

[00:03:24]

Krish:

Exactly.

Nobody says:

"I wish I could browse transportation requests."

They say:

"I wish I could share my Uber."

---

[00:03:56]

[Laughter]

---

[00:04:09]

Operations Representative:

So we're really discussing whether Taxi Pool becomes the primary product experience.

---

[00:04:27]

Krish:

Yes.

That's the decision we need to make today.

---

[00:05:03]

Product Advisor:

From a business perspective I think it's obvious.

Taxi Pool solves a much bigger problem.

---

[00:05:26]

Rhythm:

Technically it's also more differentiated.

Ride discovery alone can be copied very easily.

---

[00:05:52]

Lead Developer:

Taxi Pool introduces additional work though.

We'll need:

- Pool creation
  - Pool management
  - Group chat
  - Matching engine
  - Pool status tracking
- 

[00:06:34]

Krish:

That's fine.

I'd rather build the right thing.

---

[00:06:58]

Product Advisor:

Then let's discuss matching.

Because that's the heart of the feature.

---

[00:07:22]

Rhythm:

If we do exact destination matching we will have a very low success rate.

---

[00:07:42]

Lead Developer:

Agreed.

People enter locations differently.

---

[00:08:01]

Rhythm:

Even within Thane.

Someone enters:

- Viviana Mall
- Majiwada
- Teen Hath Naka

They're all essentially going to the same area.

---

[00:08:36]

Product Advisor:

So destination clustering?

---

[00:08:44]

Rhythm:

Yes.

Cluster-based matching.

---

[00:08:58]

Krish:

I think that's the right approach.

I care more about successful pools than perfect location accuracy.

---

[00:09:36]

Operations Representative:

Any concerns about user experience?

---

[00:09:48]

Lead Developer:

Not really.

We can still display exact destinations.

The clustering happens behind the scenes.

---

[00:10:24]

Product Advisor:

Sounds reasonable.

---

[00:10:41]

Discussion Outcome:

Destination Clustering Approved

---

[00:11:09]

Krish:

Next topic.

Payments.

---

[00:11:26]

Lead Developer:

If we introduce payments immediately, complexity increases significantly.

---

[00:11:51]

Rhythm:

Agreed.

We'll need:

- Payment gateway
  - Settlement logic
  - Refund handling
  - Failure recovery
- 

[00:12:24]

Product Advisor:

Do we actually need that for MVP?

---

[00:12:40]

Krish:

I don't think so.

---

[00:12:52]

Krish:

Initially people can settle via UPI themselves.

---

[00:13:15]

Operations Representative:

So MVP only calculates the split?

---

[00:13:28]

Krish:

Exactly.

The app tells you:

Total Fare = ₹800

Participants = 4

Cost Per Person = ₹200

That's enough for launch.

---

[00:14:07]

Discussion Outcome:

Automated Payments Deferred

Manual Fare Splitting Approved

---

[00:14:46]

Product Advisor:

What about Uber integration?

---

[00:15:01]

Lead Developer:

Technically possible.

But unnecessary right now.

---

[00:15:21]

Rhythm:

Students already have Uber and Ola installed.

---

[00:15:43]

Lead Developer:

We can simply redirect users.

---

[00:16:08]

Krish:

Agreed.

Let's not over-engineer.

---

[00:16:34]

Discussion Outcome:

Direct Uber Integration Deferred

External Booking Workflow Approved

---

[00:17:18]

Product Advisor:

Let's define MVP.

---

[00:17:42]

Whiteboard Session Begins

---

[00:18:11]

Features Proposed:

1. Authentication
2. Student Profiles
3. Ride Creation

4. Ride Discovery
  5. Taxi Pool
  6. Destination Clustering
  7. Pool Chat
  8. Fare Splitting Calculator
  9. Notifications
  10. Google Maps Integration
- 

[00:19:47]

Features Proposed For Future:

1. Automated Payments
  2. Multi-Campus Support
  3. Driver Tracking
  4. Premium Membership
  5. AI Recommendations
  6. Event Transportation
- 

[00:20:28]

Product Advisor:

Looks balanced.

---

[00:20:43]

Operations Representative:

Can we realistically launch this?

---

[00:21:02]

Lead Developer:

Yes.

Provided we stay disciplined.

---

[00:21:24]

Rhythm:

The biggest risk isn't technical.

It's adoption.

---

[00:21:42]

Krish:

I agree.

The app only works if enough students use it.

---

[00:22:03]

Product Advisor:

Then our priority should be density.

More users.

More pools.

More successful matches.

---

[00:22:36]

Krish:

Exactly.

That's the metric that matters.

---

[00:23:08]

FINAL DECISION ROUND

---

[00:23:21]

Decision 1

Taxi Pool becomes the primary feature of PullUp.

Status: APPROVED

---

[00:23:54]

Decision 2

Destination Clustering replaces exact matching.

Status: APPROVED

---

[00:24:16]

Decision 3

Manual Fare Splitting included in MVP.

Status: APPROVED

---

[00:24:43]

Decision 4

Automated Payments postponed.

Status: DEFERRED

---

[00:25:11]

Decision 5

Direct Uber/Ola integration postponed.

Status: DEFERRED

---

[00:25:42]

Decision 6

Google Maps retained.

Status: APPROVED

---

[00:26:04]

Decision 7

React Native retained.

Status: APPROVED

---

[00:26:25]

Decision 8

Firebase retained.

Status: APPROVED

---

[00:27:03]

Decision 9

Version 2 requirements approved.

Status: APPROVED

---

## Meeting Ends

---

### AI-Generated Summary

#### Purpose:

Review PullUp roadmap and finalize MVP direction.

#### Major Outcome:

PullUp officially transitions from a ride discovery platform to a Taxi Pool Coordination Platform.

#### Approved Features:

- Taxi Pool
- Destination Clustering
- Pool Chat
- Manual Fare Splitting
- Notifications
- Maps Integration

#### Deferred Features:

- Automated Payments
- Uber API Integration
- Driver Tracking
- AI Matching
- Premium Membership

#### Business Goal:

Reduce transportation costs for students through shared taxi journeys.

#### Approval Status:

APPROVED FOR DEVELOPMENT

#### Version Reference:

Requirement\_v2.pdf

#### Meeting Reference:
